

### **Extension of Product Offer**

With reference to Current Report No. 1/2022 of 10 January 2022, the Management Board of Selena FM S.A. (the “Company”) reports about extension of Selena Group’s range of products from the sector of renewable energy sources (“RES”), and about increasing the Group’s commitment to environmentally friendly business activities.

Selena Group intends to invest in RES by implementing and operating biogas, biomethane, photovoltaic and wind projects in Central and Eastern Europe.

The responsibility for extending the product offer will rest with Selena Green Investments, a member of Selena Group operating in the RES sector.

In Q1 2022, Selena Group expanded its portfolio to include activities focused in particular on the implementation of photovoltaic systems on the roofs of industrial buildings, complete with accompanying works, using a traditional product range. The development towards further green investments will be a continuation of this activity.

In the opinion of the Company’s Management Board, the extension of the product offer is in line with further development of the new part of Selena Group towards expanding its presence in the area of renewable energy sources.
